## **Fundamentals of Process Safety Management - updated for 2016** **9-13 May, Boksburg, South Africa**

IChemE's flagship process safety course has been revised and updated. The content includes new case studies, latest information and current best practice. This intensive course covers the fundamentals and aims to provide an understanding of the key principles of process safety and its management.

### **New and revised topics for 2016:**

- project development
- technical risk assessment
- occupied buildings risk assessment
- environmental risk assessment
- asset integrity
- flammable atmospheres
- leadership and culture
- process safety performance
- emergency response

**Book before 8 April 2016 and save 5% >>**

### **In-company training**

Did you know that this course can be run in-house, at a time and a place that suits you? If you have several colleagues that are interested in attending this course then an in-house option could be a more cost-effective and convenient alternative, with the added advantage that the programme can be adapted to relate to your own operational processes. Please email [courses@icheme.org](mailto:courses@icheme.org) to request a quote.

### **More events in South Africa**

**Layer of Protection Analysis (LOPA)**  
**Annual Dinner & AGM**

Kind regards

Gilli Osborne
